FOREWORD

Section 401.5 of the Revenue and Taxation Code requires that the State Board of Equalization (BOE) issue to County Assessors data relating to costs of property and other information to promote uniformity in appraisal practices and in assessed values throughout the state. In an effort to comply with section 401.5, the BOE annually published Assessors' Handbook (AH) Section 531, *Residential Building Costs*.

Beginning with the 2025 revision, the handbook is published in two separate sections. AH 531 contains annually updated cost data and, Assessors' Handbook Section 531A, *Residential Building Cost Information* (AH 531A), contains informational text, photographs, and drawings. The 2025 revision of AH 531 updates costs contained in previous editions. These costs become effective as of January 1, 2025. Both handbook sections are available only on the State Board of Equalization's (BOE) website.

Diligent efforts will continue to be made to supply accurate and reliable information published annually with the cost data contained within AH 531, but it is important for the appraiser to research local costs, as well as analyze permit costs and fees of jurisdictions in the region and to make appropriate adjustments where necessary. Due primarily to the wide variance in these costs, both within and among the counties, it may be necessary to supplement the data provided in AH 531 with local cost data.

The combination of low inventory and high demand has resulted in increased sale prices for single family homes in most of the major cities in California. Mortgage interest rates have decreased slightly due to a reduction in inflationary factors.

Costs in this 2025 revision of AH 531 have some increases due to the continued rise in the material and labor portions of the cost structure. Appraisal judgment should be used to adjust for any market change that could affect costs after the publication date of AH 531.

MOUNTAIN RESIDENCES

ADDITIVE COSTS

Costs of additive items such as fireplaces, porches, and others, will be quite different in the mountain areas of the state than they are in the Sacramento base area. Therefore, a set of additive costs that are *specific* to mountain residences are included in AH 531.22. However, if costs are needed for additives not found in the this section of AH 531.22, use the costs in the *Building Additives* chapter (AH 531.40) and make appropriate adjustments. Since the additive costs in AH 531.40 were developed for the Sacramento area base, up to three location adjustments may be necessary for mountain residences:

1. The Sacramento base additive costs (AH 531.40) must be multiplied by a factor of 1.30 to adjust those costs to the Lake Tahoe Basin area.
2. If necessary, an adjustment for location within the mountain areas should be made using the instructions from the *Location Adjustments* section of AH 531.
3. If necessary, an adjustment may also be needed for any local cost differences present in the county (for example, high permit fees).

Stall Shower	\$2,318 to \$3,313

SLOPE ADJUSTMENTS

Mountain cabins built on sloping lots will cost more than if they are built on level lots. If the land is a sloping lot, this extra cost should be included in the cost estimate of the building.

The cost of the walls of a building that are not a part of the area that square-foot costs are applied to are estimated using in-place costs. This estimate includes the in-place cost of all materials above a normal foundation (12" to 18" above ground) and the bottom of the next floor structure where square-foot costs have been applied.

The excessive cost of hillside construction called crippling should be included by adding an additional cost for the extra walls, structural members, and high foundation. This extra cost can be estimated by adding the following cost to the highest wall on the steepest side of the house.

<u>Wall Height</u>	<u>Cost Per Linear Foot</u>
4'	\$107.56
6'	\$197.55
8'	\$305.12
10'	\$394.74

MOUNTAIN RESIDENCES

LOCATION ADJUSTMENTS

The building costs in the *Mountain Residences* chapter in AH 531 have been developed using the Lake Tahoe Basin area of California as the base area (with a factor of 1.00).

The map, on page 7 of AH 531.10, shows mountain residence locations in California and suggested factors that are intended to provide an appropriate adjustment for the variance in costs due to differences in location compared to the base. *These factors, however, are not intended to adjust for the significant variation in permit costs and other fees charged by different jurisdictions within a region. Due to the wide variance in these costs, both within and among the counties, it is necessary for the appraiser to research and analyze permit costs and fees of jurisdictions in the region and to make appropriate adjustments where necessary. AH 531 should serve as a guide, but an appraiser must also research the market to determine which costs are most applicable for the appraisal assignment. It may be necessary to supplement the data provided in AH 531 with local cost data.*

An additional adjustment for time should be considered if costs in the county have changed since the January publication date of the costs in AH 531.

The appropriate mountain residence location adjustment should be applied to the *Square Foot Area Cost Tables* and *Costs of Additives* sections found in this chapter.

NOTE: When developing costs for mountain residences by using data from other AH 531 chapters that have the Sacramento area base (*Building Additives*, *Residential Garages*, *Yard Improvements*, *In-Place Costs*, and *Compact Costs*), *it is necessary to first make an upward adjustment using a 1.30 factor* to bring the costs up to the mountain residences base. Then, the appropriate mountain residence location adjustment factor should be applied.

Finally, all costs in AH 531, except for manufactured housing, should be adjusted to account for any extraordinary permit or other cost differences that exist in the county.

NOTE: The above cost factors are to be used only in the valuation of manufactured homes that are in excess of 8 feet in width or in excess of 40 feet in length, and/or in excess of 320 square feet. To compute square footage, measure the exterior perimeter of the unit(s) at the floor level. DO NOT INCLUDE THE TOW BAR.

Cost factors for all manufactured home quality classes include a cost for forced-air heating. Air conditioning is an additive. These cost factors do not include an allowance for park location value.

FOUNDATION

Single Story

For units on permanent foundations	1,000 sq. ft. to 1,800 sq. ft.	\$5,225 to \$6,303
	1,801 sq. ft. to 3,000 sq. ft.	\$6,304 to \$7,686

DEPRECIATION

The depreciation table in this handbook section is *suggested as a guide to appraisers*. The percentage rates are applicable to the replacement cost estimates and **no minimum percent good is intended**. They are *averages* based upon *an analysis of actual market purchase price information*, and revisions to the table may be necessary as more market data become available.

The percentages only apply to manufactured housing in average condition. A separate adjustment should be considered for deferred maintenance (cost to cure). It is strongly suggested that the appraiser carefully evaluate the *effective age* of the manufactured home. This is a critical adjustment that will dramatically affect the cost approach. ***Investigation has shown that the condition of the manufactured home may have a greater influence on value than age.***

BUILDING ADDITIVES

COVERED PORCHES AND LEAN-TOS

Costs of covered porches may be estimated by application of a fraction of the main building square-foot cost.

<u>Suggestions for Fractions</u>	<u>Suggested Fraction</u>
Low (ground level) floor (usually concrete) without banister, with unceiled shed-type roof	1/4 - 1/3
High (house floor level) floor (concrete or wood) with light banister. Unceiled shed-type roof	1/3 - 1/2
Same ceiled and with roof-like residence (most typical)	1/2
Same partially enclosed with screen or glass	1/2 - 2/3
Enclosed lean-to (sleeping porch or similar) with lighter foundation, wall structure, interior finish or roof than that of house to which attached	1/2 - 3/4
Roofed-unenclosed-recessed porch, under the same roof as the main building and with the same type and quality foundation (includes shape costs)	3/4
Roofed-enclosed-recessed porch with the same type roof and foundation as the main building (includes shape costs)	4/4
Good arbor or pergola with floor	1/4 - 1/3

RESIDENTIAL BASEMENTS

<u>Size</u>	<u>Cost Per Square Foot</u>					
	Unfinished Basements			Finished Basements		
Less than 400 square feet	\$56.75	-	\$76.79	\$100.54	-	\$136.04
401 - 1,000 square feet	\$45.38	-	\$61.37	\$80.38	-	\$108.75
Over 1,001 square feet	\$40.04	-	\$54.18	\$70.94	-	\$95.96

All basement costs assume normal soil conditions, 8' ceiling height, no plumbing, partitions, or windows.

Unfinished basements are based upon reinforced concrete floors and walls, open ceilings and minimum lighting.

Finished basement costs are based upon reinforced concrete floors with vinyl tile cover, reinforced concrete walls with plywood paneled finish, acoustical tile ceiling and lighting similar to average residences.

Stair access is not included in the basement cost and should always be added.

DOMESTIC WATER SYSTEMS

Homes that are not served by a public water system usually obtain necessary water from a well. However, wells (including the hole, casing, grouting, and gravel pack) are considered real property and appraised as part of the land value. The pump, motor, tank, and distribution piping are considered improvements and are appraised as part of the improvement value.

Many types of pumps are available for domestic wells, but two types are the most common. They are jet pumps and submersible pumps.

SUBMERSIBLE PUMPS

A submersible pressure system consists of a multi-stage centrifugal pump coupled to an electric motor. The entire unit is submersed below the water level. Water enters a screened section of pipe and is pumped to the surface. This system is by far the most common as it is used in about 60 to 80 percent of all new pump installations.

JET PUMPS

Jet pumps involve a centrifugal pump connected to an ejector consisting of a nozzle and venturi tube. Both the pump and motor are installed at ground level, and the only parts submerged are the pipes and ejector. Maximum pumping depth is 200 feet. Jet pump systems generally cost between 15 and 20 percent less than submersible systems.

<u>Casing Diameter</u>	<u>Plastic Casing</u>	<u>Steel Casing</u>
6"	\$67.79 - \$74.25	\$74.25 - \$80.70
8"		\$80.70 - \$87.12

Price ranges are due largely to the area in which wells are drilled. The harder the soil, the more costly to drill. Domestic wells rarely have casing greater than 8" in diameter.

SEPTIC TANK COSTS

<u>House Description</u>	<u>Tank Size</u>	<u>Cost</u>
2 bedroom house	1,000 - 1,250 gallon tank	\$8,545 - \$11,235
3 bedroom house	1,250 - 1,500 gallon tank	\$10,396 - \$12,950
4 bedroom house	1,500 - 2,000 gallon tank	\$16,367 - \$19,253
5 bedroom house	2,000 - 2,400 gallon tank	\$18,291 - \$20,216

The installed cost of septic tanks will vary greatly depending upon soil conditions and type of system. Heavy clay or rocky soil will increase the cost of the system.

RESIDENTIAL GARAGES

MULTIPLE-FAMILY RESIDENTIAL GARAGES

Built at ground level and under a multiple-family unit.

SQUARE-FOOT COST TABLE

Area	400	800	1,200	2,000	3,000	5,000	10,000	20,000
Cost	\$46.21	\$41.20	\$36.99	\$32.65	\$30.50	\$29.17	\$28.47	\$26.98

These costs include the following components.

1. A reinforced concrete floor in all areas.
2. Exterior walls, on one long side and two short sides, made up of a standard wood frame with stucco on both sides.
3. Steel support columns for the floor above.
4. A stucco ceiling in all areas.
5. The difference between the cost of a standard wood frame floor structure at the second floor level and one at the ground.
6. An average quality light fixture per each 600 square feet.

For multiple-family residential garages built at ground level under a multi-family residence and including all components listed above except exterior walls, use \$23.80 per square foot.

MULTIPLE-FAMILY RESIDENTIAL GARAGES BUILT AS SEPARATE BUILDINGS

Cost	\$55.76	\$49.82	\$45.43	\$44.70	\$43.14	\$39.47	\$37.91	\$37.20

These costs include the following components:

1. Foundations.
2. A reinforced concrete floor in all areas.
3. Exterior walls, on one long side and two short sides made up of a standard wood frame with stucco on both sides.
4. Steel support columns supporting the roof.
5. An unceiled standard wood frame roof structure with composition tar and gravel, wood shingle, or light shake cover.
6. An average quality light fixture per each 600 square feet.

Common wall: deduct \$5.82 per square foot of wall area

CARPORTS

Wood or steel posts, asphalt floors, built-up wood frame, or corrugated metal roof at \$21.69 to \$25.01 per square foot.

RESIDENTIAL GARAGES

BASEMENT GARAGES

One level, five feet below grade, directly beneath 2- to 4-story apartments with perimeter walls in vertical alignment.

SWIMMING POOLS

SWIMMING POOLS

	<u>Cost Per Square Foot</u>
Concrete Pools	\$85 - \$157
Fiberglass Pools	\$64 - \$85
In-ground Liner	\$41 - \$64

A typical 440 square foot concrete pool will cost between **\$102.85 and \$146.41** per square foot.

Swim spas are narrow lap pools with powerful jets that create a current. The swimmer swims in place against the current—**\$54,172 to \$92,238**.

A key cost in fiberglass pools is for shipping the pool from the manufacturer to the local installer. Shipping charges can add between **\$1,597 to \$4,525** to the cost of the pool.

400	\$6,944	Redwood decking per square foot	\$55.57

NOTE: Solar heating costs around three to four times more than standard gas heating, average **\$10,418 to \$13,890**. See AH 531.40 and 531.40A for additional data on solar heated pools.

Two typical types of filters are the cartridge and the diatomaceous earth. Typically, these costs are in the basic pool. Deduct for cartridge filter **\$1,042 - \$1,738**.

NOTE: Permit costs vary throughout the state ranging from **\$200 to \$2,662**.

NOTE: Pool sweeps average **\$2,609**, but may be personal property.

RESIDENTIAL HOT TUBS AND SPAS

Both spas and hot tubs commonly have pumps, filters, jets, blowers, and heaters that may be used in any class or size installation. Most units are gas and average about 8 percent more in cost than electric.

There is little difference in spa and hot tub installed costs. Below ground and aboveground have offsetting costs that are about equal. Replacement costs consider typical installations with normal access. Additions to existing residences may result in an excessive installation cost due to restricted access. Labor costs should be added to the historical cost of owner-installed units.

The following tables provide replacement costs for the most common installations, in place, and include materials, sales tax, and installation labor. Component deductions include materials, sales tax, and labor. Higher capacity components are interchangeably used in all classes. The components used will indicate where the replacement cost should fall in the table range of each class.

ENERGY REQUIREMENTS MANDATED BY TITLE 24 (AB 970, 2001)

	Cost	Climate Zones *
Radiant barrier	\$690	2, 4, 7-15
Spectrally selective glass	\$917	2, 4, 8-15
Duct sealing with testing	\$402	All
Thermostatic expansion valves (TXV)	\$118	2, 8-15

Adds approximately **\$2,529** for a typical 2,000 square foot residence for Climate Zones 2 and 8-15.
Climate zones 1,3, 5, and 6 only require duct sealing.

AH 531.70 DEPRECIATION TABLES

AVERAGE LIFE TABLES FOR BUILDINGS

Type of Schedule and Average Life		Classification					
Construction Type	Use Type	5	6	7	8	9	10
C	Multiple Residence ¹	50	55	55	60	60	60
C	Single-Family Residence ²	55	60	60	60	60	60
D	Multiple Residence ¹	50	55	55	60	60	60
D	Single-Family Residence ²	55	60	60	60	60	60

Average life assumes normal maintenance, but no functional obsolescence due to poor design.

When a decimal classification is used, apply the average life for the nearest whole classification. When a half-classification (for example, 7.5) is used, raise to the next higher classification (that is, 8) for selection of the average life.

¹ This table is applicable to residential buildings of more than two living units each.

² This table is applicable to residential buildings of one or two living units each.

AH 531.90: COMPACT COSTS

Compact costs do not apply to *Mountain Residences* due to the nature of building in mountainous areas, which requires more individual analysis of elements, such as construction site slope and construction materials, among others.

PROCEDURE

Cost estimates are made by selecting a proper square-foot cost from a table and multiplying it by the living area of the building. If the building has air conditioning and/or fire sprinklers, a square-foot cost is added to the basic square-foot cost. If a garage is present, a lump sum amount for a single, double, triple, or other size garage is added.

Following is an example of a cost estimate made using the standard cost tables and a cost estimate using compact costs.

STANDARD COST TABLES

Residence D7C (Post- 1990 Modern Type)	2,200 sq. ft.	x	\$177.13	=	\$389,686
Concrete Covered Porch (1/3)	56 sq. ft.	x	\$59.04	=	\$3,306
Forced Air Heating and Cooling (Overhead Outlets)	2,200 sq. ft.	x	\$8.72	=	\$19,184
Garage (Attached)	440 sq. ft.	x	\$54.62	=	\$24,033
Wood Covered Concrete Patio	300 sq. ft.	x	\$38.04	=	\$11,412
Fence (1" x 4" Redwood)	130 lin. ft.	x	\$38.24	=	\$4,971
Concrete Flatwork	1,000 sq. ft.	x	\$8.35	=	<u>\$8,350</u>
RCN					\$460,942

COMPACT COST METHOD

Residence D7	\$186.52
A-C (cool only)	\$6.83
Fire Sprinkler System	<u>\$6.23</u>
Residence Garage, Double	2,200 sq. ft. x \$199.58 = \$439,076 <u>\$29,192</u>
RCN	\$468,268

Extra items, such as swimming pools, septic systems, or pressure systems, should be added to the cost estimate.

ADDITIONS

Additions can be cost estimated using a compact square foot cost based upon the quality class of the addition and the total area of the original house plus the addition. The square foot cost is applied to the addition area only.

If the addition has built-ins, plumbing fixtures, cabinets, or other additives that were not included in the original structure, the cost of the additives should be added by appropriately increasing the quality class of the addition.

The cost of the addition is then adjusted for location by using the Single-Family Residential Map in AH 531.

Example:

Assume an original 1,200 square foot, D7.0, air conditioned residence with a two-car garage in Mendocino County that was built and first sold in 1996.

On January 1, 2025, a 400 square foot addition with a quality class of D7.0 is built. The RCN of the addition is computed as follows:

Total Area for Modification	
Original Residence	= 1,200 sq. ft.
Addition	= <u>400</u> sq. ft.
Total Square Feet	= 1,600 sq. ft.

COMPACT COSTS

Addition	400 sq. ft. x \$197.00 = \$78,800
Air Conditioning	400 sq. ft. x \$6.83 = \$2,732
Fire Sprinklers	400 sq. ft. x \$6.23 = <u>\$2,492</u>
Total RCN January 1, 2025	\$84,024
Location Adjustment	<u>1.15</u>
RCN Addition	\$96,628

All quality class building specifications, information, and photographs
are published in AH 531A, located on the [BOE website](#).

COMPACT COSTS

All square-foot costs include typical porches, yard improvements, and heating systems. Air conditioning systems and garages are to be added. Built-ins, plumbing fixtures, and fireplaces may be included as per building quality class specifications.
